Homes	Kitchen	Tile
Condos	Bathroom	Marble
Apartments	Bedroom	Engineered
Elder Care	Living Room	Laminates
Restaurants	Entrance	Stone
Hotels	Basement	Wood
And More...	And More...	And More...

The Contractors Choice

**CHOOSE YOUR RADIANT FLOOR WARMING SYSTEM
THE SAME WAY THE PROFESSIONALS DO!**

Lowest Profile

Insist on Low Low Low! With the lowest profile in the industry, the small diameter of our cables (1/16" - 1/8") keeps your finished floor heights as low as possible.

Total Flexibility

Insist on Any Shape or Size! A floor cable system should easily accommodate any shape or size room. Our cable kits are available in all voltages and range from 12 square feet - 275 square feet and can be combined to handle all larger areas.

Thermostats

Insist on Control! We offer a variety of thermostats, including Manual, Programmable, Digital, Touch Screen and WI-FI compatible models.

Ultimate Reliability

Insist on Single! With our Single Conductor Cable System, you will enjoy warmth and comfort with the best overall long term solution for an embedded floor warming system.

Fast, Easy Installation

Insist Plastic! Our floor warming system includes plastic spacing strips which are easy to cut and affix to any floor. Installation is fast and easy as the strips have slots every inch to ensure accurate cable spacing. (Metal spacing strips and an electric heating element cable are not a good combination.) The ThermoRay cable also works with all uncoupling membranes

Superior Service

Insist on All the Time Service! Our technical support team can assist before, during and most importantly - After the installation is complete.

Engineered for Life

Insist on ThermoRay! Our floor warming systems are engineered to last the life of your floor.

**GET THE ULTIMATE IN FLOOR WARMING AND
ADD WARMTH TO ANY SPACE !**
